Changing an Order in Admin

A quick guide for Account Managers

Almost every change starts the same way: ***Orders*** *→* ***View*** *on the order → the* ***Services*** *table. Each service has its own buttons;* ***⇄ Swap Tactic*** *sits above the table. Button names below match the screen.*

Which button do I use?

What happened	Use	Trello
Client is switching one tactic for another	**⇄ Swap Tactic**	Comment on old card + IO card; new card built
AE picked the wrong service	**Correct**	Comment, new card built, revised IO attached
Client wants to stop a service	**Cancel**	Comment; due date moves to the effective date
Campaign continues past its end date	**↻ Renew**	Comment; due date moves to the new end date
Amount, dates, or budget need changing	**✎ Edit**	Comment, revised IO attached
Website hosting start date moved	**✎ Edit Hosting Date**	Nothing, update Trello yourself
You collected intake answers on a call	**✎ Fill in this intake form**	On Mark Complete: comment + form on that tactic's card
The order's Trello setup didn't finish (⚠ in the Orders list)	**Retry Trello**	Creates only the missing cards
An AE sent a request from the Companion Form	**Pending Requests** **tab**	See "Requests" below

Watch for a red message. Admin finds cards from the IDs saved on the order (or, for campaigns with no Insertion Order, by searching the client's Trello list). If it can't find a card, it skips that comment and shows the success message with a red warning naming the missed card, for about 14 seconds. Update that card by hand. Some older orders have no saved IO card, so the IO comment and revised IO are skipped. For a service that makes several Trello cards (for example the SEO package), Admin comments on every card in the package and moves their due dates when the end date changes. The same red message appears if Trello refuses a comment or file ("Trello was not fully updated"); add it by hand.

Confirm with the AE first. Cancel, Edit, Renew, Swap Tactic and Correct each have a box like "I confirmed this change with the AE." (Correct and Cancel word it for that action). You must tick it before anything saves, and the Trello comment says you confirmed. Approving or rejecting an AE's request doesn't need it.

Changing a service

⇄ Swap Tactic Client switches tactics, e.g. YouTube TV → Streaming TV

STEPS Pick **Current Tactic**, **New Tactic**, **Effective Date**, **New Monthly Budget**, **New Tactic Runs Through** (and a **Variant** if asked). A preview shows the first month split by days. Click **Confirm Swap**.

RESULT Old tactic ends the day before the effective date (or is cancelled if it hadn't started). New tactic starts on the effective date; its card is reused if the client has one, otherwise built from the service's template.

WATCH FOR Use this instead of Cancel plus a new Insertion Order, which leaves two lines for one client. The Services table keeps showing the original tactic; the swap is in the order's history.

Correct — AE picked the wrong service

STEPS Pick the **Correct service**, fill in price, dates, and variant, add a **Reason** (3+ characters), tick **I confirmed the correct service with the AE.**, click **Confirm Correction**.

RESULT Replaces the service on the same order with no new signature. Order is marked Revised, the right card is built (or reused), and a revised IO is attached. If the card couldn't be built, a **Finish Trello card** button appears.

WATCH FOR Not offered for SEO, add-ons, setup fees, hosting, or agent splits. Refused if the old service already has spend, a confirmation, a pause, an open request, or a closed Accounting month. Then Cancel it and use a new Insertion Order.

Cancel — Client stops a service

STEPS Click **Cancel** on the row, set the **Effective Date** (starts as today), add a reason if you like, click **Submit Cancellation**.

RESULT Red **Cancelled** badge; the Renew button goes away. Order totals don't change; they still show what was sold. Strategist and Accounting keep the line running through the month of the effective date.

WATCH FOR If the service has a notice period or early-termination fee and the date is too soon, an amber warning appears. It doesn't block you. Past dates are allowed, and the date isn't compared to the service's start, so double-check it.

↻ Renew — Campaign continues past its end date

STEPS Click **↻ Renew**. Where the amount is editable, choose **Renew as is** or **Renew with modifications**. Enter **New End Date** (required) and, if modifying, an optional **New Monthly Budget** (one number). Click **Confirm Renewal**.

RESULT Same line continues with a "Renewed" badge. No new card, no revised IO.

WATCH FOR It only checks the new end is after the start, not after the current end. No Renew for one-time or cancelled services. An agent/county split has its own Renew, which comments on that agent's card only.

✎ Edit — Change an amount, dates, variant, modules, or quantity

STEPS Ad budget services: **Monthly Rate**, **Whole Campaign Total** (split by days), or **Custom by Month**. Single monthly amount with no catalog price: **New amount**. One-time or fixed-price: dates and variant only. Click Save.

RESULT Order shows a **Revised** tag with the old amount. Strategist and Accounting update too. A revised IO is attached to the IO card. The tactic card's due date or title only changes if you changed the end date, variant, or modules.

WATCH FOR A service with more than one amount (e.g. setup fee plus monthly) has no Edit button; ask an admin. Monthly Rate mode doesn't warn if the end is before the start.

✎ Edit Hosting Date

Enter the **New Hosting Start Date**; the prorated charge is recalculated. Updates Admin and Accounting only. **Trello is not changed**, so update the card yourself.

✎ Fill in this intake form

Save as Draft sends nothing. **Save & Mark Complete** comments on that tactic's card and attaches the form (not on the IO card). Nothing is required, and a Complete form can't be reopened.

Retry Trello — An order's Trello setup didn't finish

STEPS **Orders** → tick **⚠ Trello needs attention** → **View** the order → **Retry Trello** → OK.

RESULT Creates only the missing cards (the IO card with its PDF, and the service cards); cards already there are left alone. When nothing is left, the order is marked synced.

WATCH FOR Not on an order under 10 minutes old. If the client has no Trello list, it asks first, then finds or creates one. Multi-agent clients and per-agent cards: it lists what's missing and you finish by hand. If Trello won't show the list, it stops and creates nothing.

Requests from the Companion Form

ARRIVES	You get an email naming the client, the AE, and the services and actions only. Open the **Pending Requests** tab for dates and amounts, plus the AE's confirmation that the client authorized the change.
BUTTONS	**Approve** makes the change now (order, Strategist, Accounting, Trello). **Reject** opens a note box; closing it without typing **still rejects**. On a Cancel, **Effective date to apply** lets you change the date first; the AE is told. Any note you write goes to the AE and the group's IO recipients, so write it for them.
AFTER	When every item in a submission is resolved: one combined comment on each affected card, a revised IO if any item was an Edit or Renew, and one email to the AE and the group's IO recipients (the always-BCC list is blind-copied).
WATCH FOR	Approving a Cancel does **not** show the notice-period warning, so check the contract first. A Renew or Edit that puts the end before the start is blocked; ask the AE to resubmit or reject.

Campaigns with no Insertion Order on file (imported or strategist-created)

HOW	AEs request changes in the Companion Form as usual; they show in Pending Requests as **(no IO on file)**. There is no Cancel, Edit, or Swap button in Admin for them, so requests are how they are changed.
TRELLO	Admin looks in the client's list for the **campaign card** (tactic name + client name) and the **IO card** (named "IO" or "IO - …") and comments on both. If it finds only one, it comments there and names the one it missed. If several could match, it skips that card and tells you.
WATCH FOR	No module or quantity changes, no intake choice, and no revised IO, since there is no signed order.

Also good to know

You manage	**Clients** (add, edit, hide, import from Trello, audit card names; leave the **Trello List ID** alone unless you're sure) · **Groups** (Group Info, IO recipients, Trello board, Strategist Portal setting, and a **History** tab showing who changed what and when) · **AEs and Strategists**.
Ask an admin	Service catalog, intake forms, legal text · custom pricing, accounting overrides, Accounting Map · user logins and roles · deactivating a group · the always-BCC list.
New service?	There is no Admin button to add a service to an existing order. Submit a new Insertion Order.
Red message?	A card wasn't found, or Trello refused the comment or file, so nothing was posted there. Add it by hand and check the card is named the usual way.
